VISCOELASTIC MEMORY FOAM

Slow recovery and easy molding foam, sensitive to pressure and body temperature. Adapts perfectly to the anatomy of the patient, maximizing the support surface and distributing the pressure evenly.

ERGONOMIC

The anatomically shaped cushion provides better positioning and greater pelvic stability, thus contributing to increased comfort and convenience to the user.

ALVEOLAR RELIEF

The pressure relief points favor the air circulation, which reduces the maceration effects and helps preventing the formation of bed sores.

INDICATIONS

- Prevention of scabs in sensitive areas in patients who remain seated for long periods of time or disabled (such as paraplegics, quadriplegics, among others);
- Supporting element in the treatment of some types of pressure ulcers.
